I recently began the Backend Software Development Course, through [Promineo Tech](#) in partnership with [Idaho State University](#)'s Continuing Education Workforce Training program, under the instruction of [Javy Martinez](#). We have begun diving into Java programming and utilizing [GitHub](#) repositories. As I have some programming background, the language has been coming fairly easily. However, as I have never used GitHub until now, my biggest hurdle this week was getting singular GitHub repositories to work between multiple machines. To solve this problem I learned the basics about cloning, merging, and pulling repositories.

 You hired a new developer onto your team!

But now they have to spend hours configuring their dev environment. ...see more
